June, 2009

Community Health Nurses Association Canada, Calgary, Alberta

Funded by the Public Health Agency of Canada; Affiliated with McMaster University

National Collaborating Centres for Public Health (NCCPH)

Established to make research and evidence-informed practice in public health more relevant and understandable for individuals and organizations that can use this information on a daily basis

NCCMT Goals

- **Methods and Tools for KSTE**
 - Identification, development and evaluation
 - Accessibility
 - Uptake and adoption
 - Call to stakeholders to address gaps
- **Evidence-Informed Practice**
 - Raise awareness
 - Address capacity
- **Build a KSTE Network**
 - Sustainable partnerships and linkages

National Collaborating Centre
for Methods and Tools

Centre de collaboration nationale
des méthodes et outils

What is the Registry of Knowledge Translation?

- An interactive and expanding on-line database
- Contains critically appraised resources to plan, implement and evaluate knowledge translation activities
- Developed for Public Health or can be adapted

National Collaborating Centre
for Methods and Tools

Centre de collaboration nationale
des méthodes et outils

Progress of the Registry Product

- Improvements to Registry based on usability survey
- Emphasis on screening current inventory:
- 413 relevant resources
- 134 resources screened with inclusion criteria
- 22 resources critically appraised
- 21 summaries statements

National Collaborating Centre
for Methods and Tools

Who Uses the Registry?

The Registry of Knowledge Translation Methods and Tools for Public Health can help:

- Front-line public health practitioners to find resources that help communicate new knowledge to clients and colleagues;
- Public health decision-makers locate methods that support innovation uptake in their organization;
- Program evaluators obtain tools to synthesize and appraise public health related research;
- Knowledge brokers find methods to apply a new technique for working with community partners;
- Policy-makers locate tools to summarize relevant evidence for public health policy decisions;
- And more...

The Registry for Knowledge Translation Methods and Tools for Public Health is designed for anyone interested and involved in public health across Canada needing access to current, summarized, information about Knowledge Translation Methods and Tools . This

site aims to help various individuals who work in public health, such as frontline practitioners, knowledge brokers, health promoters, managers, decision-makers, policy makers, evaluators and researchers, [Search](#) for applicable methods and tools.

When using the Registry, you will find summaries of different tools and methods applicable to Public Health that help in the "planning, doing, and evaluating" of different types of Knowledge Translation activities, including:

- [Knowledge Dissemination](#)
- [Knowledge Synthesis](#)
- [Knowledge Exchange](#)
- [Knowledge Application](#)

Search The Registry

How Can I Search the Registry?

Step 1: Choose a Resource

The resources contained in the Registry include both [methods](#) and [tools](#).

Step 2: Choose an Activity

Choose Knowledge Dissemination, Knowledge Synthesis, Knowledge Exchange, or Knowledge Application.

Step 3: Choose a Stage

The methods and tools contained in the Registry are further categorized according to the **stage of activity** that they facilitate or support: [planning](#), [doing](#) or [evaluation](#).

Currently there are 10 methods and 8 tools in the Registry. You can search for methods and tools using any of the four strategies listed below.

Show All

Click the button on the right for an alphabetical listing of all resources contained in the Registry.

Show All

Keyword Search

Enter your keyword(s) into the box below and hit the Search button to find records that match on any of the given words.

Example Summary: Brief Summary

Tool for Assessing Applicability and Transferability of Evidence

(Buffett, C., Ciliska, D., & Thomas, H., National Collaborating Centre for Methods and Tools (NCCMT), Hamilton, Ontario, Canada)

Resource: Tool

Activity: Application

Stage: Doing

Brief Summary: This tool is part of an overall process that explores whether and how to apply evidence into public health decision-making and policy-making. Public health decision-makers base clinical and policy decisions on high quality evidence when it is available. Decision-makers must also consider whether or not an intervention that worked in a research study could apply to local programs and policy. This tool was created to help public health managers and planners make decisions about local programming priorities. Public health decision-makers who want to incorporate high quality evidence in their programming can use this tool to help determine whether a policy or program is relevant or feasible. This tool can be used by decision-makers in any public health program area.

Example Summary: Relevance For Public Health

Tool for Assessing Applicability and Transferability of Evidence

Buffett, C., Ciliska, D., & Thomas, H., 2007

<p>Relevance for Public Health</p>	<p>This tool was created to help public health managers and planners make decisions about local programming priorities. Public health decision-makers who want to incorporate high quality evidence in their programming can use this tool to help determine whether a policy or program is relevant or feasible. Created for public health, this tool includes questions relevant to public health context such as collaboration with stakeholders, needs for local implementation, assessment of the political and organizational climates, and evaluation of the costs related to outcome. This tool can be used by decision-makers in any public health program area.</p>
<p>Description</p>	<p>This tool is part of an overall process that explores whether and how to apply evidence into public health decision-making and policy-making. Public health decision-makers base clinical and policy decisions on high quality evidence when it is available. Decision-makers must also consider whether or not an intervention that worked in a research study could apply to local programs and policy. Applicability assesses the feasibility of providing an intervention in a local setting. Applicability considers cost-effectiveness, organizational culture and capacity (Buffet, Ciliska, & Thomas, 2007). The tool includes questions that assess the following applicability factors: political acceptability or leverage; social acceptability; available resources; and organizational expertise and capacity. Transferability assesses the likelihood that the intervention developed and delivered in one setting can achieve the same outcomes when applied in a</p>

Example Summary: Description

Description

This tool is part of an overall process that explores whether and how to apply evidence into public health decision-making and policy-making. Public health decision-makers base clinical and policy decisions on high quality evidence when it is available. Decision-makers must also consider whether or not an intervention that worked in a research study could apply to local programs and policy. Applicability assesses the feasibility of providing an intervention in a local setting. Applicability considers cost-effectiveness, organizational culture and capacity (Buffet, Ciliska, & Thomas, 2007). The tool includes questions that assess the following applicability factors: political acceptability or leverage; social acceptability; available resources; and organizational expertise and capacity. Transferability assesses the likelihood that the intervention developed and delivered in one setting can achieve the same outcomes when applied in a different local setting. Considerations for transferability include generalizability and community effectiveness (Buffet et al., 2007). The tool includes questions that assess the following transferability factors: magnitude of the health issue in a local setting; magnitude of the 'reach' of the intervention; and target population characteristics. Users of the tool can assign their own scoring system for the tool. A methodological rating of 'unknown' was assigned for this tool since the evaluation of its measurement characteristics is in progress.

Example Summary: Evaluation and Access Characteristics

Evaluation and Measurement Characteristics	
Evaluation	Information not available
Validity	 Validity properties meet accepted standards. Content validity completed. Content was changed after it was reviewed for content validity. No further validity testing has been completed to date.
Reliability	Reliability testing in progress
Methodological Rating	 Unknown/No evidence
Accessing the Method/Tool	
Language(s)	 Bilingual
Format(s)	 Paper copy

National Collaborating Centre
for Methods and Tools

Centre de collaboration nationale
des méthodes et outils

<http://www.nccmt.ca/registry/view/eng/32.html>

Example Summary: Implementation

Implementing the Method/Tool	
Who is involved	Authors of this tool recommend the tool be completed by a group comprising interested and concerned parties from inter-sectoral, multidisciplinary and consumer groups. A facilitator is required to orient the group and establish timelines.
Time	Information not available
Additional Resources and/or Skills Needed for Implementation	Not specified
Steps for Using Method/Tool	<p>Preliminary steps prior to use of the tool: Generate a question to drive literature search and review process; search and retrieve relevant literature; critically appraise identified literature. When valid, higher quality evidence is found, this tool is used to assess the feasibility and transferability of research findings into public health practice.</p> <p>Step 1: Establish a facilitator for the overall process who can act as group leader and maintain timelines. Step 2: Select key stakeholders to form a group who can commit to completing the tool and working to achieve consensus. Step 3: Select as a group applicability and transferability assessment questions that are most important for the intervention of interest and local context. Step 4: Since not all criteria are relevant for the particular intervention considered, the group selects some criteria as more important than others.</p>

National Collaborating Centre
for Methods and Tools

Centre de collaboration nationale
des méthodes et outils

<http://www.nccmt.ca/registry/view/eng/32.html>

Example Summary: Development

Method/Tool Development	
Developer(s)	C. Buffet, D. Ciliska and H. Thomas for the National Collaborating Centre for Methods and Tools
Method of Development	This tool was developed from synthesizing literature related to knowledge synthesis, translation and exchange and relevant to applicability and transferability. A skilled librarian conducted an initial search (1996-2006) with an update in February 2007. Over 250 potentially relevant articles were appraised for applicability and transferability. Overall findings revealed no consensus on the criteria to evaluate the applicability and transferability of evidence for public health decision-making. Relevant literature informed the assessment questions for applicability (e.g. can it work?) and transferability (e.g. will it work?)
Release Date	2007
