The Nurse-Family Partnership: Evidence-Based, Targeted Home Visiting

- Focus on young, first-time, low-income mothers
- Enrollment prior to 29 weeks gestation
- Visits range weekly to monthly
- Visits span 2 ½ years
- Proven child and maternal benefits
Methods

Phase one
- Design: Secondary analysis of focus group data from pilot Canadian NFP study
- Sample: NFP Nurses from pilot (n = 6)
- Data collection: 5 focus groups between 2009-2011
- Analysis: Conventional content analysis

Phase two
- Design: Interpretive description
- Sample: All past and current NFP Nurses (n = 10)
- Data collection: Individual interviews
- Analysis: Conventional content analysis

Long-term Home Visiting with Vulnerable, Young Mothers: Impacts on Public Health Nurses
Emerging Themes: Impacts of Home Visiting

• Centrality of the therapeutic relationship

• Simultaneous experience of great personal reward and emotional toll

• Nurses value the NFP model and describe their experience as ‘transformative’ and ‘life-changing’

• NFP is in stark contrast to existing home visiting programs
Conclusions

- The nurse is foundational to program success
- The team is crucial to supporting nurses who work in isolation
- Both formal and informal mechanisms to debrief are utilized by nurses
- Consider organizational contributions to work stress
